

All-in-one access and authentication solution to secure your business.

LastPass Business: Password Management with Advanced Single Sign-On and Multi-Factor Authentication

In an always-connected world where employees are working from anywhere, businesses are challenged to keep their critical information secure. Even as cyberthreats rise, employees expect technology to be fast, convenient, and easy to use. There are more devices, applications, networks, and even users in your business ecosystem, which means managing and protecting employee access is more complex than ever.

With so much in flux, businesses can find themselves overwhelmed. How can you protect user access and authentication in an automated, secure, and affordable way? Your business requires a single solution that is simple, integrated, and seamless while increasing security.

LastPass protects your business from cyber-threats, without compromising ease of use and employee productivity. As an all-in-one access and authentication solution, LastPass empowers employees to generate, secure, and share credentials seamlessly, while providing simplified access and authentication to cloud and legacy apps, VPNs, and workstations. With LastPass password management, SSO, and MFA, your business can maintain visibility and control into your security while ensuring protection through LastPass' zero-knowledge security infrastructure.

Frictionless employee experience

Keep things simple with one place to store and access every tool. LastPass does all the work of connecting, creating, remembering, and filling passwords, while providing an additional layer of security with multi-factor authentication. With an integrated single sign-on and password management solution, employees can seamlessly access the cloud apps and credentials required for their job without switching between solutions.

Unified admin control

Give a holistic view of end-user activity across password management, single sign-on, and multi-factor authentication, in a single, easy-to-use dashboard. LastPass ensures businesses give the right

access to the right people at the right time. With single sign-on for top priority apps, and password management to capture and secure everything else, LastPass protects every access point in one admin view. Eliminate tedious, manual tasks and provide visibility into access security across the business.

Flexible, granular controls

Holistic security doesn't have to be complex. LastPass offers 100+ policies that manage users at the app, individual, group, or organizational level, so you can customize access requirements to meet the needs of your business. Set granular policies, like specifying an app that can only be accessed from certain locations or at certain times.

Password management, SSO, and MFA

Comprehensive security controls

Flexible integrations

Easy user management and reporting

Convenient password sharing

Secure and flexible sharing for collaborative teams – from IT to marketing groups – while maintaining accountability. By using generated passwords and revoking access in real time, LastPass ensures that company data doesn't leave with departing employees.

High adoption, fast results

LastPass is not only easy to set up and maintain, but self-guided resources and built in dashboards help admins with rollout and employee communications so businesses can achieve better results with no extra services required.

Biometric and contextual intelligence

By combining biometric and contextual intelligence, LastPass MFA proves a user's identity with a combination of factors, without increasing the friction of the login experience.

Passwordless access

Passwords are an unending source of frustration and risk. Using biometrics and adaptive authentication, LastPass MFA can eliminate passwords and streamline employee access to work applications to improve productivity.

Designed for security first

We're uncompromising when it comes to data security. User data is encrypted and decrypted at the device level so that the master password – and the sensitive data stored in LastPass – are kept secret, even from us. In addition, biometric data is encrypted at the device level and never leaves the user's device.

These features deliver the security control businesses require and the convenience users expect:

Central admin console	The admin dashboard offers automated user management, policies, diagnostic dashboards and more.
Universal password management	Simplify access to all apps as well as generate and automatically capture, store, and fill credentials for any login.
User directory integrations	Automate onboarding and offboarding, group management and more with AD, Azure AD, Okta, OneLogin, or a custom API.
100+ security policies	Enforce best practices and control password behavior across the business.
Detailed security reports	Tie actions to individuals with automated, detailed reporting that helps your business maintain compliance.
Secure password sharing	Give teams a flexible, safe way to share access to apps without sacrificing accountability or security.
Dark web monitoring	LastPass monitors your employees accounts and sends them an alert if information is compromised to keep their accounts safe.
Advanced Single sign-on	Make critical business tools accessible to employees with simplified access to an unlimited number of cloud applications.
Advanced Multi-factor authentication	Access to the LastPass Authenticator application to secure cloud and legacy apps, VPNs, and workstations with passwordless access. Granular geofencing, time and IP address policies to enable admin control and increase security.
